## What is a reference management software?

- **A tool to harvest, record and store bibliographic metadata via integration with browser**
- **A way to organize references to various sources or media**
- **It often integrates with word processing software**
- **Some offer the opportunity to harvest full text articles**
- **Some provide group libraries for sharing metadata**

**...and full text articles**

## I want to ask you:

- **As library, do we have an obligation to inform about copyright infringement related to the use of reference management software?**
- **The sharing features are quite obvious in reference management software, but could it be a solution not to show the features when we teach in the software?**
